

DOUBLE EAGLE Plus 4 SPECIFICATIONS

Screen

Image quality, resilience, and safety are important to Par T Golf in designing a screen. Dimensioned at 12 feet wide x 9 feet high (366cm X 274cm), the screen is fabricated from a durable nylon fabric with a special fire retardant backing. It provides a very high definition surface for the projection of golf course or entertainment images.

Golfing Area

Par T Golf provides a golfing area that is 14 feet wide x 20 feet long (427cm X 610cm) as a standard. This area can be modified to meet your requirements. A 10-foot (305cm) high ceiling is highly recommended, but shorter ceiling heights can be accommodated.

Par T Tri-Turf™ “The Incredible Golfing Mat”

Keeping Par T Golf ahead of the game is the Par T Tri-Turf™, “The Incredible Golfing Mat”. Rated as the most realistic-feeling hitting surface in simulated turf, it is made from multiple types of brush fibers 2 inches (5cm) deep.

The “give” to the mat approximates the resilience of natural turf, allowing a true feel to the hit and minimizes the possibility of the physical problems associated with golfers elbow caused by other simulated golf ball hitting surfaces. A ball can be played from anywhere on the 24-inch wide x 48-inch long (61cm x 122cm) Par T Tri-Turf.

Choose from three ball lie options:

- A** A Tee or fairway - This firm area allows the use of a regular wooden tee for tee shots, or you can hit a fairway shot from this forgiving, grass-like surface.
- B** Rough - This segment of soft fibers allows the ball to seat down substantially, resulting in a 13% decrease in the normal distance for each club. Its not US Open rough, but its close enough
- C** Sand bunker - The sand segment of soft white fibers allows the ball to seat down low for truly realistic sand shots. Whats really amazing is, no one has to rake the sand.
